AMPHITHEATER CONSTRUCTION ON GROUND FLOOR

The Student Government Association of 1972-1973 began to build a Beaufort Tech amphitheater. The Student Government failed to complete the project; so, the 1973-1974 Student Government is striving to complete it. It will take the cooperation and work of the students to finish this amphitheater by the end of the spring quarter. Completion of this amphitheater will not only bring recognition to the students of Beaufort Tech, but it will be the only amphitheater in either of the 57 community colleges and technical institutes of North Carolina.

STUDENT UNION

There is a deep concern not only among the students but also among the administration for a student union. The planning, financing, and erection of a student union is a time consuming process. It has been recognized as a basic need of students. Once the students have the union, the technical institute will benefit from it as a whole. This union would eliminate noise in the halls, the lack of space in the lounge, the lack of communication among students and the lack of student unity. A book store will be available where the students can buy and sell used books. These are just a few things a student union could do. But in order for students to build a place such as this, it will take a lot of hard work and dedicated people. Not just a small portion of the students, but the student body as a whole.
