Look out!
Beaufort County Community College has a new logo. The stylized logo depicts the BCCC service area with water and gulls. Tricia Woolard, BCCC's Coordinator of Media Services, designed the logo, which was approved by the college's Publications Committee and Administrative Council. The logo will eventually be used on all campus publications and in print advertising.

Future Site Approved For New Building

The Beaufort County Community College Board of Trustees has selected the location and approved the schematic design for the campus' future Student Services/Science Classroom building. Trustees made these decisions based on drawings and a scaled model presented by Architect, Richard Johnson, of the East Group. Building #9 will be constructed behind the Administration building and to the west of the LRC. Johnson said it will have one floor with approximately 23,000 square feet. The Student Services/Science Classroom building will house four new science laboratories for physics, biology, chemistry, and anatomy. There will also be an electronic classroom for distance learning. Student Services offices will be moved to the new building, including admissions, counseling, financial aid, and the registrar. Construction on the building is tentatively scheduled to begin this summer and be completed by the end of 1995.

Surveying begins for Building 9.
